

DCTR TOKEN

Official Whitepaper — v3.2 (Reviewed Edition)

Satirical SocialFi & Geopolitical Web3 Simulator
Network: Solana | Official Handle: @drjnab

"The Illusion of Democracy in the Age of Degens"

This edition supersedes Whitepaper v3.1 — comprehensive accuracy & transparency review
Reviewed edition — August 2026

Revision Notice

This document (v3.2) is a comprehensive review and update of DCTR Whitepaper v3.1. It corrects figures against verifiable on-chain data at the time of review, replaces static claims that can drift from reality with dynamic, source-linked statements, and adds an official transparency and verification section. No changes were made to the project's governance structure, roadmap intent, or core mechanics — only to factual accuracy and disclosure.

Field	Details
Previous version	v3.1
Current version	v3.2 — Reviewed & Updated
Key changes	Tokenomics figures corrected to live on-chain data; burn percentage restated accurately at 25.25% (was previously cited as ~50%); formulaic forward burn policy (9% of every monthly unlock) plus burn-to-mint NFT Trophies, unclaimed-trophy burn, and a guarded Founder's Exceptional Decree mechanism added; Trophy Reserve unlock re-timed to month 6 with a merit-based, discretionary distribution mechanism; official links & verification section added
Review basis	Solana on-chain data (Solscan), DEX Screener, Streamflow lock contract

■ Satire & Entertainment Disclaimer

DCTR is a satirical, entertainment-oriented SocialFi simulator. Nothing in this document constitutes financial, investment, or legal advice, and no return, value, or outcome is promised or guaranteed. Digital assets are volatile and can lose all value. Participants should conduct their own research and only engage with funds they can afford to lose.

Table of Contents

1. Executive Summary & Vision
2. Governance, Executive Cabinets & Military Ranks
3. Tokenomics & Locked Trophy Reserves
4. Official Links & On-Chain Verification
5. Execution Roadmap (v3.2)

1. Executive Summary & Vision

DCTR is a satirical SocialFi ecosystem that simulates political regimes, deep-state manipulation, and geopolitical warfare inside Web3. In a crypto market obsessed with “decentralization,” DCTR strips away corporate fluff and embraces a blunt premise: money is power. Players join territorial sectors, participate in rigged elections, undergo systematic “suppression,” and wage economic wars against other regions based on trading performance and diamond-hand conviction.

Project type: Satirical SocialFi & Geopolitical Web3 Simulator | Network: Solana | Official handle: @drjnab | Core theme: “The Illusion of Democracy in the Age of Degens”

2. Governance, Executive Cabinets & Military Ranks

A. Sector Presidents & Cabinet Appointments

Each Sector President holds absolute administrative authority within their region and possesses the power to appoint specialized Cabinet Ministers:

- **Ministry of Technical Analysis (TA):** responsible for drawing meaningless chart lines and predicting 100x gains.
- **Ministry of Ridiculing Dumb Traders:** dedicated to creating memes and publicly mocking top-buyers and panic-sellers.
- **Ministry of War & Rescue:** coordinates emergency liquidity ops and call-out trading duels against rival sectors.
- **Special Rescue Squads:** fast-response Telegram/X units assigned to raid rival sector chats during market dips.

B. The Founding Dictator (@drjnab — The Unshakeable Rule)

The Founding Dictator (@drjnab) exists outside and above all political structures. No citizen, president, or cabinet member holds authority over the Founder.

Removal conditions — the Founder's reign never expires unless under two conditions:

- Complete loss of internet connection.
- Physical death.

Succession protocol: upon death or disconnection, the regime passes solely to the President holding the highest number of Pointy-Topped Nuclear Warheads.

Founder powers & punishments:

- **Mandatory Speech Punishment:** forcing rebellious sectors into a locked Discord stage to listen to a 10-minute uninterrupted Founder speech.
- **Nuclear Arsenal Distribution:** hand-delivering Tactical Nuke Badges to Sector Presidents who achieve 100 consecutive successful trades.
- **Top-Buyer Mockery:** absolute immunity to mock any trader buying local price tops.

3. Tokenomics & Locked Trophy Reserves

3.1 Supply Overview

Metric	Value	Status
Total mint supply	1,000,000,000 DCTR	Fixed — mint & freeze authorities permanently revoked
Current on-chain supply	747,500,141 DCTR	Snapshot at time of review — verify live via Solscan (Section 4)
Burned to date	252,499,859 DCTR (25.25%)	Total Mint minus Current On-Chain Supply, as of Aug 25, 2026
Forward burn policy	9% of every monthly unlock	Applied automatically at each Streamflow release — see 3.1.1
Core locked treasury (Streamflow)	~370,000,000 DCTR	Actively locked — 3-month cliff, linear vesting
Trophy & Presidential Reserve	150,000,000 DCTR	Phase 2 lock — see 3.3

Burned to date — 25.25%: as of this review (August 25, 2026), 252,499,859 DCTR of the 1,000,000,000 total mint has been permanently burned via the Solana Incinerator, calculated as Total Mint minus Current On-Chain Supply. This figure is a snapshot and will continue to rise under the forward burn policy below — always cross-check the live figure via Solscan (Section 4) before relying on it.

3.1.1 Forward Burn Policy

Starting with this revision, DCTR commits to a fixed, formulaic burn rate applied to every monthly unlock released from the Core Locked Treasury (Section 3.2): **9% of each monthly release is permanently burned** via the Solana Incinerator at the time of unlock, with the remaining 91% released as scheduled.

Monthly unlock	Burned (9%)	Released (91%)
20,000,000 DCTR	1,800,000 DCTR	18,200,000 DCTR

This policy is deflationary by design on top of the existing lock schedule: every unlock event permanently reduces total supply, rather than releasing the full amount into circulation. Actual burn transactions tied to each unlock are verifiable on-chain via the token contract (Section 4).

3.1.2 Additional Burn Channels (Utility-Linked)

Beyond the scheduled monthly burn above, DCTR incorporates two further burn mechanisms that tie deflation directly to real platform engagement rather than the calendar alone:

- **Burn-to-Mint NFT Trophies:** minting or redeeming any NFT Trophy (Section 3.3) requires burning a corresponding amount of DCTR, set per trophy tier. This links scarcity directly to genuine participation and achievement inside the game, rather than to a fixed emission schedule alone.
- **Unclaimed Trophy Burn:** any portion of a seasonal reward pool left unclaimed at the close of a competitive season is automatically and permanently burned rather than rolled over or redistributed — rewards can never sit around as latent future sell-pressure.

Together, the three mechanisms (scheduled unlock burn, burn-to-mint, and unclaimed-trophy burn) make DCTR's deflation multi-layered: part fixed and predictable, part driven entirely by community activity.

3.1.3 Founder's Exceptional Decree (Discretionary Burn Event)

In keeping with the Founder's absolute authority (Section 2B), @drjnab retains the power to declare an **Exceptional Decree**: a one-off, publicly announced burn of some or all of a given month's unlock, above and beyond the standard 9% policy. This is a deliberate narrative and strategic tool, not a routine mechanism, and is bound by the following guardrails:

- **Occasion-triggered, not scheduled:** a Decree is tied to a specific milestone or event (e.g. a season launch, a major community achievement, a market event) — never a standing monthly default.
- **Publicly announced in advance:** the Founder announces the Decree and its exact burn amount before execution, keeping it verifiable on-chain like every other burn channel.
- **Operational budget is protected by default:** because the Core Locked Treasury also funds cabinet incentives, liquidity, and season rewards, a full-unlock Decree is understood to be rare and exceptional — repeated or routine use would undermine the very treasury the game depends on to run.

The Exceptional Decree exists to give DCTR's satirical "absolute power" premise a real, on-chain consequence — while the guardrails above keep it from quietly becoming the default policy in place of the sustainable 9% mechanism.

3.2 Core Locked Treasury (Streamflow)

376,000,000 DCTR was allocated to the Core Locked Treasury structure, of which approximately 370,000,000 DCTR is actively held under the Streamflow lock contract (non-custodial, linear vesting). The lock is publicly verifiable on-chain — see Section 4.

Parameter	Detail
Cliff period	3 months from contract start
Vesting type	Linear, non-custodial (Streamflow)
Release cadence	~20,000,000 DCTR released per month following the cliff
Total lock duration	18 months (full schedule, cliff to final unlock)

This schedule is a summary for reader convenience. The Streamflow contract itself is the single source of truth — always verify exact amounts and dates directly on the contract page linked in Section 4 before relying on any figure for a decision.

3.3 Trophy & Presidential Reserve (150,000,000 DCTR — Phase 2 Lock)

Purpose: dedicated as presidential trophies and rewards for presidential election cycles.

Unlock timing: planning and system design for this reserve begins 3 months after launch, aligned with the Core Locked Treasury's cliff expiration (Section 3.2). The **first actual distribution**, however, is deliberately deferred to **month 6 post-launch** — deferred and separated from the Core Treasury's initial unlock event to avoid compounding sell-pressure at a single moment, and to ensure enough verified in-game performance data exists before any reward is issued. From month 6 onward, distribution follows the 10-year schedule (15,000,000 DCTR/year) during presidential terms, to maintain hyper-long-term sustainability.

3.3.1 Distribution Mechanism — Merit-Based, Discretionary Allocation

Rather than a fixed top-down percentage split, distribution from this reserve is structured around earned merit and sector-level accountability:

- **Citizens holding trophies/badges (achievers):** the primary recipient pool. Allocation is weighted by verified in-game achievement, not by citizenship alone.

- **Non-achieving citizens (“Broke Citizens”):** receive a minimal, symbolic allocation — enough to remain part of the ecosystem, but deliberately smaller than the achiever pool.
- **Sector Presidents & Cabinet Ministers:** each Sector President holds full discretion over their sector's ministerial allocation. Presidents set individual performance targets (“Call-Out Targets”) for each of their Ministers and reward them proportionally to their percentage of target achievement — functioning as a call-out-style performance bonus rather than a fixed salary.

This structure intentionally mirrors the project's satirical premise: reward is not evenly distributed by default — it is earned, negotiated, and occasionally political, exactly like the systems DCTR satirizes.

4. Official Links & On-Chain Verification

All figures in this whitepaper should be treated as a snapshot. For live, authoritative data, always verify directly against the sources below.

Official Repository (viewing & contact)

- **GitHub Repository**

[GitHub Repository — to be added upon upload]

Primary channel for the whitepaper source file, revision history, and public documentation.

On-Chain Verification Sources

- **Token Contract / Mint Address**

View live total supply, holders, and burn history on Solscan.

- **Live Market Data (DEX Screener)**

<https://dexscreener.com/solana/2zbyjdbjxbaxzkg6gepwosk413lgm2fs1qn8csyhb3ng>

Real-time price, liquidity, and trading activity on PumpSwap.

- **Core Locked Treasury — Streamflow Contract**

<https://app.streamflow.finance/contract/solana/mainnet/6Xry6ozWDdaDwNDsvMTpt1pcps7UjT2CFX4GJYyau5XE>

Live, non-custodial vesting contract for the 370,000,000 DCTR core lock. Cliff, release cadence, and remaining balance are all verifiable here in real time.

Why this section matters

A recurring criticism of new token projects is that whitepapers state figures once and never update them, while on-chain reality moves on. DCTR's governance philosophy is built on exposing exactly this kind of gap in the space it satirizes — so this whitepaper commits to linking primary sources rather than restating numbers that can silently go stale.

5. Execution Roadmap (v3.2)

Phase 1 — The Regime Setup

- Finalize GitHub repository setup and publish Whitepaper v3.2.
- Link official @drjnab X handle and establish the 8 regional Telegram sectors.
- Launch the automated DCA Liquidity Engine via Jupiter.

Phase 2 — The Trophy Reserve & Presidential Cabinet Deployment

- Execute the 150,000,000 DCTR 10-year lock protocol (unlocks start 6 months after game launch).
- Deploy the Cabinet Appointment System (TA, War, Rescue, Mockery Ministries).
- Launch the Tactical Nuclear Warhead tracking system for 100-trade win streaks.
- Integrate the Founder's Discord Mandatory Speech Bot.

Phase 3 — Geopolitical War & CEX Expansion

- Host the inaugural "Supreme Leader Presidential Election."
- First annual distribution from the 10-year Trophy Reserve.
- Apply for Tier-2/Tier-1 CEX listings (Binance pipeline).

End of Whitepaper v3.2. This document will continue to be revised as the project evolves; the GitHub repository (Section 4) is the canonical location for the latest version.
